

## **Individual reflection 1 by Jonathan Köre**

### **What do I want to learn or understand better?**

I would want to understand git a bit better. I have used git and github in other courses but we never used git to its full potential, such as using the feature rebase. I have already taken a small tutorial the I believe was linked on the course website, and I can look into taking another tutorial on the subject, but the best way to learn is to use these features when we start coding the actual project.

I also want to get better at incorporating already existing framework into our project, as I am not very familiar with this. This I can learn by watching video tutorials on it, as well as asking for help when we are about to integrate it into our project.

In the week to come, we will work on the business model, and this is something which I have no experience with. I hope that the girls from I can teach me about this.

### **how can I help someone else, or the entire team, to learn something new?**

I can't think of any particular information that I can teach my team. As I mentioned in the previous question, I am not very good at git or at any special framework, and would like to learn this. But maybe I am just modest and actually know more than I think. If someone has a question and I know the answer, I will of course help them.

### **what is my contribution towards the team's use of Scrum?**

We have not yet started with Scrum in the group, but might get around to doing this during the next week.

### **what is my contribution towards the team's deliveries?**

I did some research on sustainable development and transporting so that I could contribute in coming up with an idea for the project. This "research" included watching a handful of Tedx talks about the subject, and I gained some knowledge on this topic. I wrote down some valuable points to discuss with the group, but luckily Andrea had come up with a good idea that we all agreed on for the time being. I would have liked us to dig into the subject and the idea even more, but hopefully we are not behind, and will be able to catch up in the week to come.

I helped in the forming of the social contract by giving my input on the various topics discussed in the contract.
